# Comprehensive

# Science III

# Curriculum Map

**Regular and Advanced**

## Parts of the Curriculum Map

The curriculum map defines the curriculum for each course taught in Volusia County. They have been created by teachers from Volusia County Schools on curriculum mapping and assessment committees. The following list describes the various parts of each curriculum map:

- **Units:** the broadest organizational structure used to group content and concepts within the curriculum map created by teacher committees.
- **Topics:** a grouping of standards and skills that form a subset of a unit created by teacher committees.
- **Learning Targets and Skills:** the content knowledge, processes, and skills that will ensure successful mastery of the NGSSS as unpacked by teacher committees according to appropriate cognitive complexities.
- **Standards:** the Next Generation Sunshine State Standards (NGSSS) required by course descriptions posted on CPALMS by FLDOE.
- **Pacing:** recommended time frames created by teacher committees and teacher survey data within which the course should be taught in preparation for the EOC.
- **Vocabulary:** the content-specific vocabulary or phrases both teachers and students should be familiar with and use during instruction and assessment.

Some maps may also contain other helpful information, such as:

- **Resources:** a listing of available, high quality and appropriate materials (strategies, lessons, textbooks, videos and other media sources) that are aligned to the standards. These resources may be found at [www.edmodo.com](http://www.edmodo.com) within the group folders. Contact the District Science Office for assistance in joining groups.
- **Teacher Hints:** a listing of considerations when planning instruction, including guidelines to content that is inside and outside the realm of the course descriptions on CPALMS in terms of state assessments.
- **Sample FOCUS Questions:** sample questions aligned to the standards and in accordance with EOC style, rigor, and complexity guidelines; they do NOT represent all the content that should be taught, but merely a sampling of it.
- **Labs:** The NSTA and the District Science Office recommend that all students experience and participate in at least one hands-on, inquiry-based, lab or activity per week where students are collecting data and drawing conclusions. The district also requires that at least one (1) lab per grading period should have a written lab report with analysis and conclusion.
- **Common Labs (CL):** Each grade level has one common Lab (CL) for each nine week period. These common labs have been designed by teachers to allow common science experiences that align to the curriculum across the district.
- **Volusia Literacy Tasks (VLT):** Each grade level has one Volusia Literacy task (VLT) for each nine week period. These literacy experiences have been designed by teachers to provide common literacy activities that align to the curriculum across the district.
- **DIAS:** (District Interim Assessments: Science) are content-specific tests developed by the district and teacher committees to assist in student progress monitoring. The goal is to prepare students for the 8<sup>th</sup> grade FCAT 2.0 or Biology EOC using rigorous items developed using the FLDOE Item Specifications Documents.

The opening pages of the map include information about the FCAT 2.0 content breakdown, the Volusia County Science 5E Instructional Model, cognitive complexity information for developing various levels of questions for classroom use, and the Florida ELA and Math Standard that may be in the course descriptions.

Use FCAT Explorer and Florida Achieves! For Student FCAT help and Teacher resources

**Recommendations for success on the FCAT 2.0 Science:**

1. Use frequent formative assessment of measurement topics.
2. Students should have access to and use [FCAT Explorer](#) and [Florida Achieves!](#)
3. Instruction should be at the same level of rigor as the learning targets in the curriculum map.

### Volusia County Science 5E Instructional Model

	Description	Implementation
<b>Engage</b>	Learners engage with an activity that captures their attention, stimulates their thinking, and helps them access prior knowledge. A successful engagement activity will reveal existing misconceptions to the teacher and leave the learner wanting to know more about how the problem or issue relates to his/her own world. <i>(e.g. ISN-preview, Probe, Teacher Demonstration...)</i>	<p>The diagram below shows how the elements of the 5E model are interrelated. Although the 5E model can be used in linear order (engage, explore, explain, elaborate and evaluate), the model is most effective when it is used as a cycle of learning.</p>  <p>Each lesson begins with an engagement activity, but evaluation occurs throughout the learning cycle. Teachers should adjust their instruction based on the outcome of the evaluation. In addition, teachers are encouraged to differentiate at each state to meet the needs of individual students.</p>
<b>Explore</b>	Learners explore common, hands-on experiences that help them begin constructing concepts and developing skills related to the learning target. The learner will gather, organize, interpret, analyze and evaluate data. <i>(e.g. investigations, labs...)</i>	
<b>Explain</b>	Learners explain through analysis of their exploration so that their understanding is clarified and modified with reflective activities. Learners use science terminology to connect their explanations to the experiences they had in the engage and explore phases. <i>(e.g. Lecture, ISN-notes, Research, Close-reading, reading to learn, videos, websites...)</i>	
<b>Elaborate</b>	Learners elaborate and solidify their understanding of the concept and/or apply it to a real world situation resulting in a deeper understanding. Teachers facilitate activities that help the learner correct remaining misconceptions and generalize concepts in a broader context. <i>(e.g. labs, web-quest, presentations, debate, discussion, ISN-reflection...)</i>	
<b>Evaluate</b>	Teachers and Learners evaluate proficiency of learning targets, concepts and skills throughout the learning process. Evaluations should occur before activities, to assess prior knowledge, after activities, to assess progress, and after the completion of a unit to assess comprehension. <i>(i.e. formatives and summatives)</i>

## Cognitive Complexity

The benchmarks in the Next **Generation Sunshine State Standards (NGSSS)** identify knowledge and skills students are expected to acquire at each grade level, with the underlying expectation that students also demonstrate critical thinking.

The categories—**low complexity, moderate complexity, high complexity**—form an ordered description of the demands a test item may make on a student. Instruction in the classroom should match, at a minimum, the complexity level of the learning target in the curriculum map.

Low	Moderate	High
<p>This category relies heavily on the recall and recognition of previously learned concepts and principles. Items typically specify what the student is to do, which is often to carry out some procedure that can be performed mechanically. It is not left to the student to come up with an original method or solution.</p>	<p>This category involves more flexible thinking and choice among alternatives than low complexity items. They require a response that goes beyond the habitual, is not specified, and ordinarily has more than a single step or thought process. The student is expected to decide what to do—using formal methods of reasoning and problem-solving strategies—and to bring together skill and knowledge from various domains.</p>	<p>This category makes heavy demands on student thinking. Students must engage in more abstract reasoning, planning, analysis, judgment, and creative thought. The items require that the student think in an abstract and sophisticated way often involving multiple steps.</p>
<p>Students will:</p> <ul style="list-style-type: none"> <li>• <b>retrieve information</b> from a chart, table, diagram, or graph</li> <li>• <b>recognize</b> a standard scientific representation of a simple phenomenon</li> <li>• <b>complete</b> a familiar single-step procedure or equation using a reference sheet</li> </ul>	<p>Students will:</p> <ul style="list-style-type: none"> <li>• <b>interpret</b> data from a chart, table, or simple graph</li> <li>• <b>determine</b> the best way to organize or present data from observations, an investigation, or experiment</li> <li>• <b>describe</b> examples and non-examples of scientific processes or concepts</li> <li>• <b>specify</b> or <b>explain</b> relationships among different groups, facts, properties, or variables</li> <li>• <b>differentiate</b> structure and functions of different organisms or systems</li> <li>• <b>predict</b> or <b>determine</b> the logical next step or outcome</li> <li>• <b>apply</b> and <b>use concepts</b> from a standard scientific model or theory</li> </ul>	<p>Students will:</p> <ul style="list-style-type: none"> <li>• <b>analyze</b> data from an investigation or experiment and formulate a conclusion</li> <li>• <b>develop</b> a generalization from multiple data sources</li> <li>• <b>analyze</b> and <b>evaluate</b> an experiment with multiple variables</li> <li>• <b>analyze</b> an investigation or experiment to identify a flaw and propose a method for correcting it</li> <li>• <b>analyze</b> a problem, situation, or system and make long-term predictions</li> <li>• <b>interpret, explain, or solve</b> a problem involving complex spatial relationships</li> </ul>

\*DIAS (District Interim Assessments Science) are content-specific tests developed by the district and teacher committees to aid in student progress monitoring.

\*\*Weeks 37-39 are set aside for course review and EOC administration.

**The Nature of Science**

**Weeks 1 - 39**

\*Nature of Science Standards, NOS Focus, are explicitly applied in content throughout the year.

Topics	Learning Targets and Skills	Standards	Vocabulary
The Nature of Science	Students will: <ul style="list-style-type: none"> <li>● <b>differentiate</b> between theories and laws</li> <li>● <b>analyze</b> the methods used to develop a scientific explanation</li> <li>● <b>discuss</b> how scientific theories are different than other theories</li> </ul>	SC.8.N.2.2 SC.8.N.2.1 SC.8.N.4.1 SC.8.N.1.5 SC.8.N.3.1	laws non-example scientist theories
	Students will: <ul style="list-style-type: none"> <li>● <b>differentiate</b> between an experiment (control group and variables) and other types of scientific investigations</li> <li>● <b>plan and carry out</b> various types of scientific investigations and experiments, such as:</li> <li>● <b>make</b> predictions or <b>form</b> a hypothesis</li> <li>● <b>differentiate</b> between replication and repetition</li> <li>● <b>identify</b> test variables (independent) and outcome variables (dependent)</li> <li>● <b>identify</b> control groups for each experiment</li> <li>● <b>collect and organize</b> data</li> <li>● <b>interpret</b> data</li> <li>● <b>defend</b> conclusions</li> </ul>	SC.8.N.1.6 SC.8.N.1.1           SC.8.N.1.2	conclusions control group control group data differentiate experiment hypothesis inference interpret investigation observation outcome variable (dependent) prediction repetition replication senses test variable (independent) variables
	Students will: <ul style="list-style-type: none"> <li>● <b>use phrases</b> such as “results support” or “fail to support”</li> <li>● <b>explain</b> why science does not offer conclusive “proof” of a knowledge claim</li> <li>● <b>explain how</b> hypotheses are valuable if they lead to further investigations, even if they turn out not to be supported by data</li> </ul>	SC.8.N.1.3           SC.8.N.1.4	

Unit 1: Get Ready, Get Set, GO DO SCIENCE!		Weeks 1 – 2	
Topics	Learning Targets and Skills	Standards	Vocabulary
Get Ready	<p>Students will:</p> <ul style="list-style-type: none"> <li>• <b>get to know YOU</b> as a scientist and WHY you LOVE science</li> <li>• <b>set up a science notebook</b> to be used all year long</li> <li>• <b>develop</b> a class list of lab safety procedures in the lab</li> <li>• <b>practice</b> classroom and laboratory routines and procedures</li> </ul>		lab safety science notebook scientist
Get Set	<p>Students will:</p> <ul style="list-style-type: none"> <li>• <b>describe</b> science as the study of the natural world</li> <li>• <b>cite examples</b> of science and pseudoscience (can it be tested?)</li> <li>• <b>understand</b> the need for a common system of measurement (metric system) among scientists</li> <li>• <b>discuss</b> the VARIOUS methods used by scientists to answer questions or solve problems (controlled experiments, observational studies, engineering by design, trial and error, simulations, modeling, etc.)</li> </ul> <p><b>***Work to break the misconception that there is only 1 method used by scientists***</b></p> <p><u>NOS Focus: Differentiating science and pseudoscience; Methods used in science.</u></p>	SC.8.N.2.1  SC.8.N.2.2  SC.8.N.1.5	Science pseudoscience metric system mass volume length gram (g) liter (l) meter (m) degrees Celsius ( $^{\circ}\text{C}$ )
GO DO SCIENCE!	<p>Students will:</p> <ul style="list-style-type: none"> <li>• <b>engage</b> in 1 OR MORE labs where students:               <ul style="list-style-type: none"> <li>▪ form a hypothesis</li> <li>▪ follow a procedure using repeated trials</li> <li>▪ collect data</li> <li>▪ draw a conclusion based on evidence</li> <li>▪ use phrases such as “results support” or “fail to support” their hypothesis/claim (NOT PROVE OR DISPROVE) but may lead to further investigations</li> </ul> </li> </ul> <p><u>NOS Focus: Writing, testing and analyzing a hypothesis.</u></p>	SC.8.N.1.1 SC.8.N.1.2 SC.8.N.1.6  SC.8.N.1.3 SC.8.N.1.4	hypothesis repetition data evidence conclusion
		<b>SMT 1</b>	24 August – 4 September

<b>Keeley Probes</b>	Volume 2 #14 (Plants in the Dark) Volume 4 #9 (Magnets and Water)	
<b>Teacher Hints &amp; Instruction Focus</b>	<ul style="list-style-type: none"> <li>Students need to understand that scientists do not only learn from doing investigations but also from reading non-fiction reference materials, such as, journals, newspapers, reference books etc.</li> <li>Students need to know that scientists gain knowledge from many different methods and use sound scientific reasoning.</li> <li><b><u>The DOE is asking that we no longer have students memorize an artificial number of steps called the scientific method but that students learn scientific reasoning to evaluate whether something is sound or not.</u></b></li> </ul>	<ul style="list-style-type: none"> <li>Have students differentiate between replication and repetition and why they are important.</li> <li>Teachers should continue to model limiting variables and testing a control group for comparison purposes.</li> <li>Cover the importance of multiple trials and large experimental group.</li> <li>Students need to understand the importance of researching a topic before forming a hypothesis or conducting an investigation.</li> <li>Students need to differentiate experiment and investigation.</li> <li><a href="http://www.HappyScientist.com">www.HappyScientist.com</a> for benchmark aligned teacher demonstrations and lab ideas. (Login information may be found on <a href="#">EDMODO</a>.)</li> </ul>
<b>Science Best Practices</b>	Measurement processes and lab equipment should be discussed and used during a lab, not in isolation. Teachers should choose a lab that contains an independent and dependent variable, constants, and controls to complete with class during the first two weeks. <b><u>Research and data does not support front-loading vocabulary. The Nature of Science, referred to as the NOS Focus, are stated throughout the map to engage students in Activity Before Content (AbC) and Content Before Vocabulary (CbV).</u></b> There are many NOS Focus activities that can be found on <a href="#">EDMODO</a> in the 8 <sup>th</sup> Grade Science Nature of Science Folder.	
<b>Common Labs (CL) and Activities</b>		<b>Sample FOCUS Question</b>
<b><u>Common Lab (CL)</u></b> CL 1- Alka Seltzer Lab <u>All information for this lab can be found in 8<sup>th</sup> Grade CL folder on <a href="#">EDMODO</a>.</u> <u>This lab is recommended during the 1<sup>st</sup> or 2<sup>nd</sup> week of school to introduce and emphasize writing, testing, and analyzing a hypothesis as well as scientific thinking.</u>  <b>The following activities can be found on <a href="#">EDMODO</a> in the Get Read, Get Set, Go Do Science Folder.</b> Gems of Wisdom Science Processes NOS Focus Writing, Testing, and Analyzing, a hypothesis Formative Activity Pseudoscience Means Fake Article Song Metric System		Jay and Shanna think their classmates get more schoolwork done before lunch; they suspect that eating lunch makes people less productive. They come up with a six-week-long classroom experiment to test this, which will involve some people having to eat a smaller lunch every other day. What is the FIRST thing they need to do?  A. Ask for permission from the parents of their classmates. <b>B. Divide their class into a control group and a test group.</b> C. Keep their idea a secret so no one can influence the outcome. D. Tell a few people in class to help them get the outcome they want.
<b>Prefix / Suffix</b>	<i>No/Non – not    Scientia- wisdom    Pre- before    Dici- to say</i>	

Unit 2: Atomic Theory and Periodic Table		Weeks 3 – 6	
Topics	Learning Targets and Skills	Standards	Vocabulary
Atomic Theory	<p>Students will:</p> <ul style="list-style-type: none"> <li>● <b>recognize</b> that atoms are the smallest unit of an element</li> <li>● <b>recognize</b> that atoms are composed of subatomic particles:                             <ul style="list-style-type: none"> <li>○ Electrons</li> <li>○ Neutrons</li> <li>○ Protons</li> </ul> </li> <li>● <b>create a model or diagram</b> of an atom (nucleus and subatomic particles)                             <ul style="list-style-type: none"> <li>○ <b>discuss</b> the benefits and limitations of various atomic models</li> <li>○ <u>NOS Focus- benefits and limitations of models</u></li> </ul> </li> <li>● <b>explain</b> that theories may be modified based on new evidence, but are rarely discarded (in the context of atomic theory)                             <ul style="list-style-type: none"> <li>○ <u>NOS Focus- Scientific Theories; Technology is essential to science</u></li> </ul> </li> </ul>	<p>SC.8.P.8.7</p> <p>SC.7.N.3.2</p> <p>SC.8.N.3.2</p> <p>SC.8.E.5.10</p>	<p>electrons</p> <p>model</p> <p>neutrons</p> <p>nucleus</p> <p>protons</p> <p>subatomic particle</p> <p>theory</p> <p>technology</p>
	<p><b>Advanced:</b></p> <ol style="list-style-type: none"> <li>1. Explain that electrons, protons and neutrons are parts of the atom and that the nuclei of atoms are composed of protons and neutrons, which experience forces of attraction and repulsion consistent with their charges and masses</li> </ol>	<p><b>Advanced:</b></p> <p>SC.912.P.8.4</p>	
The Periodic Table of Elements	<p>Students will:</p> <ul style="list-style-type: none"> <li>● <b>recognize</b> that elements are grouped in the periodic table according to similar properties</li> <li>● <b>predict</b> properties of an element using a periodic table when given information about other elements in the same column                             <ul style="list-style-type: none"> <li>○ <u>NOS Focus- Science is open to change with new evidence</u></li> </ul> </li> </ul>	<p>SC.8.P.8.6</p> <p>SC.6.N.2.2</p>	<p>columns</p> <p>families</p> <p>groups</p> <p>period</p> <p>periodic table</p> <p>properties</p> <p>rows</p> <p>trend</p>
	<p><b>Advanced:</b></p> <ol style="list-style-type: none"> <li>1. Use the periodic table and electron configuration to determine an element's number of valence electrons and its chemical and physical properties</li> <li>2. Explain how chemical properties depend almost entirely on the configuration of the outer electron shell</li> </ol>	<p><b>Advanced:</b></p> <p>SC.912.P.8.5</p>	
<b>Unit DIAS: Atomic Theory and Periodic Table</b>		1 October – 2 October	

### Atomic Theory and Periodic Table Resources

<b>Textbook and NOS Focus</b>	Text: Pg. 260-281, 318-331; Investigations, pg. 157-159, Pg. 378-381 <u>NOS Focus- Benefits and limitations of Scientific Models; Scientific Theories; Science is open to change with new evidence; Technology is essential to science</u>	
<b>Safari Montage and Videos</b>	Safari Montage - Schlessinger Media: "Atoms and Molecules," [1:00-22:00], Schlessinger Media: "The Periodic Table," 23 minutes	
<b>Websites</b>	<a href="http://www.ptable.com/">http://www.ptable.com/</a> - Interactive Periodic Table <a href="#">Virtual Build An Atom</a> – Use with worksheet	
<b>Keeley Probes</b>	Volume 1 #10 (Is it Matter?) Volume 3 #1 (Pennies) Volume 3 #2 (Is it Solid)	
<b>Teacher Hints &amp; Instruction Focus</b>	<ul style="list-style-type: none"> <li>Students need to know how particles move in solids, liquids and gases.</li> <li>Items assessing subatomic particles are limited to protons, neutrons and electrons.</li> <li>Items will not assess valence electrons or electron configurations or chemical bonding.</li> <li><b>Topics are conceptual only; students should not memorize The Periodic Table</b></li> </ul>	<ul style="list-style-type: none"> <li>Students will know how elements are grouped in the periodic table according to similar properties.</li> <li>Items referring to elements are limited to the elements 1-57 and 72-89.</li> <li>Students will identify how technology is essential to science. This may be explained in Atomic Theory through Rutherford's experiment.</li> <li>Teachers with iPads can use the Elements 4D by DAQRI app.</li> </ul>
<b>Volusia Literacy Tasks (VLT)</b>	<p><b><u>Volusia Literacy Task (VLT)</u></b> VLT 1 – Solving Bad Breath One Walnut at a Time <u>Students will read the article (digital or print version) and complete the Writing Prompt VLT – 1 on the writing template.</u> <u>All resources can be found in the 8<sup>th</sup> grade VLT folder on <a href="#">EDMODO</a>.</u></p>	
<b>Labs and Activities</b>		<b>Sample FOCUS Question</b>
<p>The following activities can be found on <a href="#">EDMODO</a> in the 8<sup>th</sup> grade Atomic Theory folder: Atomic Structure Battleship (Version 1 and 2) Virtual Build an Atom (website above with worksheet) Lab Making Models of Atoms and Isotopes</p> <p>The following labs and activities can be found digitally on <a href="#">EDMODO</a> in the 8<sup>th</sup> Grade Science Periodic Table folder or paper copies in the Pearson LabZone Ancillaries: Chapter Activities and Projects: Lab - Survey Properties of Metal pg. 358-364</p> <p>The following activities can be found on <a href="#">EDMODO</a> in the 8<sup>th</sup> grade Periodic Table folder: Lab Is Density A Periodic Table Trend</p>		<p>Using a periodic table, determine which of the following pairs of elements would have the most similar properties.</p> <p>A. hydrogen (H) and helium (He)  <b>B. sodium (Na) and potassium (K)</b>  C. nitrogen (N) and silicon (Si)  D. calcium (Ca) and iron (Fe)</p>
<b>Prefix / Suffix</b>	Nuc- center    Sub- under/below    Proto- first    Neut- neither... nor    Peri- around    (H)odus- journe	

Unit 3: Compounds and Mixtures		Weeks 7 – 9	
Topics	Learning Targets and Skills	Standards	Vocabulary
Compounds and Mixtures	Students will: <ul style="list-style-type: none"> <li>• <b>differentiate</b> between atoms, elements, and compounds</li> <li>• <b>explain</b> how elements combine to form compounds that make up all living and non-living things, for example:               <ul style="list-style-type: none"> <li>○ <i>atoms share electrons to create a bond between them</i></li> </ul> </li> </ul>	SC.8.P.8.5	atom attraction bond compound dissolving element evaporation
	Students will: <ul style="list-style-type: none"> <li>• <b>differentiate</b> between pure substances, mixtures, and solutions, including:               <ul style="list-style-type: none"> <li>○ <i>solutions are mixtures that may include multiple states of matter</i></li> </ul> </li> <li>• <b>investigate</b> different ways of making and separating mixtures and solutions, including:               <ul style="list-style-type: none"> <li>○ <i>using a funnel and filter paper, a magnet, dissolving substances, screens, evaporation, etc.</i></li> <li>○ <u>NOS Focus: Making predictions; Introduction of variables</u></li> </ul> </li> </ul>	SC.8.P.8.9  SC.8.N.1.1	heterogeneous homogeneous mixtures molecule pure substance solution prediction
	<b>Advanced:</b> <ol style="list-style-type: none"> <li>1. Write chemical formulas for simple covalent (HCl, SO<sub>2</sub>, CO<sub>2</sub>, and CH<sub>4</sub>), ionic (Na<sup>+</sup> + Cl<sup>-</sup> → NaCl) and molecular (O<sub>2</sub>, H<sub>2</sub>O) compounds</li> <li>2. Predict the formulas of ionic compounds based on the number of valence electrons and the charges on the ions</li> </ol>	<b>Advanced:</b> SC.912.P.8.7	
Acids and Bases	Students will: <ul style="list-style-type: none"> <li>• <b>cite</b> common examples of acids, bases, and salts</li> <li>• <b>Investigate to classify</b> various substances using the pH scale as an acid, base, or neutral               <ul style="list-style-type: none"> <li>○ <u>NOS Focus: Replication vs repetition; Data collection and defend conclusions</u></li> </ul> </li> </ul>	SC.8.P.8.8  SC.8.N.1.1  SC.8.N.1.2	acids bases pH pH Scale salts replication repetition (repeated trials)
	<b>Advanced:</b> <ol style="list-style-type: none"> <li>1. Use experimental data to illustrate and explain the pH scale to characterize acid and base solutions</li> <li>2. Compare and contrast the strengths of various common acids and bases</li> </ol>	<b>Advanced:</b> SC.912.P.8.11	
<b>Unit DIAS: Compounds and Mixtures</b>		22 October – 23 October	

## Compounds and Mixtures and Acids and Bases Resources

<b>Textbook and NOS Focus</b>	Text: Pg. 390-401, 403-405, 378-379 NOS Focus: Making predictions; Introduction of variables; Replication vs repetition; Data collection and drawing conclusions	
<b>Safari Montage and Videos</b>	Safari Montage - Schlessinger Media: "Elements, Compounds, and Mixtures," 33 minutes	
<b>Websites</b>	<a href="http://www.TheHappyScientist.com">www.TheHappyScientist.com</a> <a href="#">Study Jams</a>	
<b>Keeley Probes</b>	Volume 4 #1 (Sugar Water)	
<b>Teacher Hints &amp; Instruction Focus</b>	<ul style="list-style-type: none"> <li>Solutions may use different states of matter, i.e. air is a solution.</li> <li>Items will not assess types of bonds in terms of ionic, covalent, polar covalent, metallic, hydrogen, and van der waals.</li> </ul>	<ul style="list-style-type: none"> <li>Students need to be able to identify common examples of acids, bases, and or salts.</li> <li>This is the first time this concept is taught in middle school.</li> <li>Items assessing acids and bases are limited to pH.</li> <li><b>Students should not memorize the specific pH value of substances</b></li> </ul>
<b>Labs and Activities</b>		<b>Sample FOCUS Question</b>
<p><b>The following labs and activities can be found on <a href="#">EDMODO</a> in the 8<sup>th</sup> grade Compounds and Mixtures folder:</b> Worksheet Elements, Compounds, and Mixtures Lab Separating a Mixture Activity Mixtures and Pure Substances</p> <p><b>The following labs and activities can be found digitally on <a href="#">EDMODO</a> or paper copies in the Pearson LabZone Ancillaries:</b> Teacher's Lab Resource Physical Science: Lab Separating Mixtures pg. 119-123 Lab Differences in Compounds pg. 45</p> <p><b>The following labs and activities can be found digitally on <a href="#">EDMODO</a> in the 8<sup>th</sup> grade Acids and Bases folder or paper copies in the Pearson LabZone Ancillaries:</b> Teacher's Lab Resource Physical Science: Lab What Color Does Litmus Turn pg. 106 Lab pHone Home pg. 116 Chapter Activities and Projects: Lab Make your own Indicator pg. 337-341</p> <p><b>The following labs and activities can be found on <a href="#">EDMODO</a> in the 8<sup>th</sup> grade Acids and Bases folder:</b> The Happy Scientist- Activity Science and The Haunted Pumpkin The Happy Scientist- Robert Krampfs Color Changing Flower Lab pH Poinsettia Lab Study Jam- Acids and Bases Activity pH Scale Sort</p>		<p>Harriet is looking through the kitchen cabinet, trying to find something with a low pH to use in removing some calcium deposits on the kitchen sink. Which of the following things has the lowest pH and therefore would be best for her to use?</p> <p>A. baking soda B. bleach C. <b>vinegar</b> D. water</p>
<b>Prefix / Suffix</b>	<i>Homo- same    Hetero- different    Gene- beginning</i>	

Unit 4: Properties of Matter		Weeks 10 – 11	
Topics	Learning Targets and Skills	Standards	Vocabulary
Physical Properties and Density	Students will: <ul style="list-style-type: none"> <li>• <b>classify</b> substances based on their physical properties, including:               <ul style="list-style-type: none"> <li>○ <i>thermal conductivity, electrical conductivity, solubility, magnetism, melting and boiling points, and density</i></li> </ul> </li> <li>• <b>investigate to explain</b> how the physical properties of matter are independent of the amount sampled, such as: <i>density and conductivity</i> <ul style="list-style-type: none"> <li>○ <u>NOS Focus – Design a controlled experiment</u></li> </ul> </li> <li>• <b>determine</b> the physical property being analyzed <b>given data from a table</b></li> </ul>	SC.8.P.8.4  SC.8.N.1.1	boiling point melting point degrees Celsius density electrical conductivity gas liquid magnetic properties mass matter physical properties saturation solid solubility solute solvent thermal conductivity volume weight
	Students will: <ul style="list-style-type: none"> <li>• <b>calculate</b> the density of solids, liquids and gases using <math>\text{Density} = \text{mass} \div \text{volume}</math> <ul style="list-style-type: none"> <li>○ <b>measure</b> the mass and volume of solids, liquids and gases</li> </ul> </li> <li>• <b>sequence</b> various substances in order of increasing or decreasing density</li> <li>• <b>differentiate</b> between mass and weight</li> </ul>	SC.8.P.8.3  SC.8.P.8.2	
	<b>Advanced:</b> <ol style="list-style-type: none"> <li>1. Discuss compressibility, malleability, reactivity, and molecular composition</li> <li>2. Describe simple laboratory techniques that can be used to separate homogeneous and heterogeneous mixtures (filtration, distillation, chromatography, evaporation)</li> </ol>	<b>Advanced:</b> SC.912.P.8.2	
	Students will: <ul style="list-style-type: none"> <li>• <b>differentiate</b> between solid, liquid, and gas based on their particle motion</li> <li>• <b>sequence</b> the states of matter by increasing or decreasing kinetic energy</li> <li>• <b>explain</b> how the state of matter of a substance is related to the average kinetic energy of its molecules</li> <li>• <b>predict</b> what happens to the motion of particles during a phase change</li> </ul>	SC.8.P.8.1	kinetic energy phase change
	<b>Advanced:</b> <ol style="list-style-type: none"> <li>1. Differentiate among the four states of matter (solid, liquid, gas and plasma) in terms of energy, particle motion, and phase transitions</li> </ol>	<b>Advanced:</b> SC.912.P.8.1	

## Physical Properties and Density Resources

<b>Physical Properties and Density Resources</b>	
<b>Textbook and NOS Focus</b>	Text: Pg. 273, 275-276, Pg. 326 NOS Focus – Design a controlled experiment
<b>Safari Montage and Videos</b>	Safari Montage - Schlessinger Media: "Properties of Matter," 23 minutes
<b>Websites</b>	<a href="#">The Happy Scientist</a> - conductivity <a href="#">Study Jams</a> - Properties of Matter/Solid, Liquid, and Gas <a href="#">pHet simulation</a> - density
<b>Keeley Probes</b>	Volume 2 #2 (Floating Laws) Volume 2 #3 (Floating High and Low) Volume 2 #1 (Comparing Cubes) Volume 2 #6 (Boiling Time and Temp)
<b>Teacher Hints &amp; Instruction Focus</b>	<ul style="list-style-type: none"> <li>• This is the first time this concept is taught in middle school.</li> <li>• This is a good opportunity to review how to design or evaluate an experiment based on scientific thinking.</li> <li>• Temperature will only be displayed in degrees Celsius.</li> <li>• Students need to know how particles move in solids, liquids, and gases.</li> <li>• Students may be required to calculate density, if so, the formula would be given.</li> </ul> <ul style="list-style-type: none"> <li>• The middle school curriculum no longer includes chemical properties of matter only physical properties of matter. The textbook goes in depth in both. Do not spend time on chemical properties of matter unless your students have mastered physical properties of matter.</li> <li>• Items may assess the concept of saturation, conductivity, or magnetic properties but no calculations.</li> <li>• Students will not need to know specific melting or boiling points.</li> </ul>
<b>Labs and Activities</b>	
<b>Sample FOCUS Question</b>	
<p><b>The following labs and activities can be found on <a href="#">EDMODO</a> in the 8<sup>th</sup> grade Physical Properties and Density folder:</b></p> <p>Picture Density Stacker Notes States of Matter Energy Changes Lab Salinity Lab Molecular Motion Lab Density of Candy Bars Inquiry Lab Density of Candy Bars The Happy Scientist - Conductivity</p> <p><b>The following labs and activities can be found digitally on <a href="#">EDMODO</a> in the 8<sup>th</sup> grade Physical Properties and Density folder or paper copies in the Pearson LabZone Ancillaries:</b></p> <p>Teacher's Lab Resource Physical Science: Lab Copper or Carbon pg. 85-92 Lab Making Sense of Density pg. 65-73 Lab What are solids, liquids, gases pg. 47 Lab Sublimation pg. 62</p> <p>Chapter Activities and Projects: Activity Build a Density Calculator pg. 365-371 Scenario-Based Investigations: Lab What a mass pg. 157-159</p>	<p>Sam is trying to convince Alan that a substance that conducts heat does not necessarily conduct electricity as well. Which of the following would be the best example for him to use to convince Alan of this?</p> <p><b>A. a piece of glass</b> B. a piece of copper wire C. a steel nail D. a paper clip</p>
<b>Prefix / Suffix</b>	<i>Homo- same Hetero- different Gene- beginning Solvere- to dissolve Satur- full</i>

Unit 4: Properties of Matter		Weeks 12 – 13	
Topics	Learning Targets and Skills	Standards	Vocabulary
Chemical Changes	Students will: <ul style="list-style-type: none"> <li>• <b>differentiate</b> physical and chemical changes in matter</li> <li>• <b>cite examples</b> of physical and chemical changes in matter</li> <li>• <b>investigate</b> physical and chemical changes in matter               <ul style="list-style-type: none"> <li>○ <u>NOS Focus – Inferences and Observations</u></li> </ul> </li> </ul>	SC.8.P.9.2  SC.8.N.1.1 SC.8.N.1.6	chemical change physical change inference observation interpret
	Students will: <ul style="list-style-type: none"> <li>• <b>explain</b> how temperature influences chemical changes               <ul style="list-style-type: none"> <li>○ <u>NOS Focus – Independent and Dependent Variables and Control Groups</u></li> </ul> </li> </ul>	SC. 8.P.9.3 SC.8.N.1.1 SC7.N.1.4	Temperature Independent variable (test) Dependent variable (outcome) Control groups
	Students will: <ul style="list-style-type: none"> <li>• <b>explain</b> why mass is conserved when substances undergo physical and chemical changes according to the Law of Conservation of Mass               <ul style="list-style-type: none"> <li>○ <b>differentiate</b> between a law and a theory</li> <li>○ <u>NOS Focus- Theory vs. Law</u></li> </ul> </li> <li>• <b>investigate</b> the law of conservation of mass using models, such as:               <ul style="list-style-type: none"> <li>○ <i>chemical equations, experiments, and demonstrations</i></li> </ul> </li> <li>• <b>design an investigation</b> to explore the Law of Conservation of Mass               <ul style="list-style-type: none"> <li>○ <u>NOS Focus – Hypothesis, Collect and Analyze Data, Draw Conclusions, and Experimental Error</u></li> </ul> </li> </ul> <p>***STEM Lab #1 will be completed during Week 14***</p>	SC.8.P.9.1  SC.7.N.3.1  SC.8.N.1.1	Law of Conservation of Mass Scientific Law Scientific Theory Experimental Error

<p><b>Common Lab (CL)</b> CL 3 – What’s Doing The Pulling? All information for this lab can be found in 8<sup>th</sup> Grade CL folder on <a href="#">EDMODO</a> . <u>This lab is recommended during the Scale of the Universe and Gravity Unit. CL 3 allows students to experience the affects of gravity on objects of various masses.</u></p>	
<b>Sample FOCUS Question</b>	
<p>One type of light that comes from the Sun is called infrared. Human eyes can't see this type of light, but specially built cameras can. Why can't human eyes detect infrared light?</p> <p>A. The energy of infrared light is too high for our eyes to detect.  <b>B. The wavelength of infrared light is too long for our eyes to detect.</b>            C. Infrared light is too fast for our eyes to detect.            D. The Sun does not give off enough infrared light for our eyes to detect.</p>	
<b>Prefix / Suffix</b>	<i>Infra- below Ultra- beyond Astro- star Nomos- arrange Planetia- wonderer -oid- “-like” Uni- one Verse- voice Gravis- heavy</i>

Unit 6: The Scale of The Universe and Gravity		Weeks 23 – 24	
Topics	Learning Targets and Skills	Standards	Vocabulary
The Stars and Our Sun	<p>Students will:</p> <ul style="list-style-type: none"> <li>• <b>describe</b> the physical properties of main sequence stars, including: <ul style="list-style-type: none"> <li>○ <i>apparent brightness (magnitude), temperature (color), size, and absolute brightness (magnitude)</i></li> </ul> </li> <li>• <b>understand</b> how technology is essential to science for such purposes as access to outer space and other remote locations, sample collections, measurement, data collection and storage, computation, and communication of information.</li> </ul>	<p>SC.8.E.5.5</p> <p>SC.8.E.5.10</p>	<p>absolute brightness apparent magnitude physical properties temperature</p>
	<p>Students will:</p> <ul style="list-style-type: none"> <li>• <b>describe</b> the properties and characteristics of the Sun, including: <ul style="list-style-type: none"> <li>○ <i>rotation, structure, convection, sunspots, solar flares, and prominences</i></li> </ul> </li> <li>• <b>create</b> models of various solar phenomena <ul style="list-style-type: none"> <li>○ <u>NOS Focus- identify the benefits and limitations of the use of scientific models</u></li> </ul> </li> </ul>	<p>SC.8.E.5.6</p> <p>SC.8.N.3.1 SC.7.N.3.2</p>	<p>convection rotation solar flares solar prominences solar properties sun sunspots</p>
	<p><b>Advanced:</b></p> <ol style="list-style-type: none"> <li>1. Describe the physical properties of the Sun (sunspot cycles, solar flares, prominences, layers of the Sun, coronal mass ejections, and nuclear reactions) and the impact of the Sun as the main source of external energy for the Earth</li> </ol>	<p><b>Advanced:</b> SC.912.E.5.4</p>

<b>Middle Grades ELA Florida Standards</b>	
<p><b>*English/Language Arts Florida Standards integrated during science labs and activities:</b></p> <p>LAFS.68.RST.1.3 – Follow precisely a multistep procedure when carrying out experiments, taking measurement or performing technical tasks.</p> <p>LAFS.68.RST.3.7 – Integrate quantitative or technical information expressed in words in a text with a version of that information expressed visually (e.g., in a flow chart, diagram, model, graph, or table.)</p> <p><b>*During class discussion and debates (ADI):</b></p> <p>LAFS.68.SL.1.1 – Engage effectively in a range of collaborative discussions (one-on-one, in groups, and teacher-led) with diverse partners on grade 8 topics, texts, and issues, building on others’ ideas and expressing their own clearly.</p> <p>a. Come to discussions prepared, having read or researched material under study; explicitly draw on that preparation by referring to evidence on the topic, text, or issue to probe and reflect on ideas under discussion.</p> <p>b. Follow rules for collegial discussions and decision-making, track progress toward specific goals and deadlines, and define individual roles as needed.</p> <p>c. Pose questions that connect the ideas of several speakers and respond to others’ questions and comments with relevant evidence, observations, and ideas.</p> <p>d. Acknowledge new information expressed by others, and, when warranted, qualify or justify their own views in light of the evidence presented.</p>	<p><b>*During Volusia Literacy Tasks (VLT) or ISN activities:</b></p> <p>LAFS.68.WHST.1.2 – Write informative/explanatory texts, including the narration of historical events, scientific procedures/ experiments, or technical processes.</p> <ol style="list-style-type: none"> <li>Introduce a topic clearly, previewing what is to follow; organize ideas, concepts, and information into broader categories as appropriate to achieving purpose; include formatting (e.g., headings), graphics (e.g., charts, tables), and multimedia when useful to aiding comprehension.</li> <li>Develop the topic with relevant, well-chosen facts, definitions, concrete details, quotations, or other information and examples.</li> <li>Use appropriate and varied transitions to create cohesion and clarify the relationships among ideas and concepts.</li> <li>Use precise language and domain-specific vocabulary to inform about or explain the topic.</li> <li>Establish and maintain a formal style and objective tone.</li> <li>Provide a concluding statement or section that follows from and supports the information or explanation presented.</li> </ol> <p><b>*During reading in the content area (CLOSE reading, SLAM, ISN, etc.):</b></p> <p>LAFS.68.WHST.3.9 – Draw evidence from informational texts to support analysis reflection, and research.</p> <p>LAFS.68.RST.2.4 – Determine the meaning of symbols, key terms, and other domain specific words and phrases as they are used in a specific scientific or technical context relevant to grades 6 – 8 text and topics.</p> <p>LAFS.68.RST.4.10 – By the end of grade 8, read and comprehend science / technical text in grades 6 – 8 text complexity band independently and proficiently.</p>

<b>Middle Grades Math Florida Standards</b>	
<p><b>*All Math Florida Standards integrated during science labs and activities:</b></p> <p>MAFS.6.EE.3.9 – Use variables to represent two quantities in a real-world problem that change in relationship to one another; write an equation to express one quantity, thought of as the dependent variable, in terms of the other quantity, thought of as the independent variable. Analyze the relationship between the dependent and independent variables using graphs and tables, and relate these to the equation. For example, in a problem involving motion at constant speed, list and graph ordered pairs of distances and times, and write the equation <math>d = 65t</math> to represent the relationship between distance and time.</p> <p>MAFS.6.SP.1.3 – Recognize that a measure of center for a numerical data set summarizes all of its values with a single number, while a measure of variation describes how its values vary with a single number.</p> <p>MAFS.8.G.3.9 – Know the formulas for the volumes of cones, cylinders, and spheres and use them to solve real-world and mathematical problems.</p>	<p>MAFS.6.SP.2.5 – Summarize numerical data sets in relation to their context, such as by:</p> <ol style="list-style-type: none"> <li>Reporting the number of observations.</li> <li>Describing the nature of the attribute under investigation, including how it was measured and its units of measurement.</li> <li>Giving quantitative measures of center (median and/or mean) and variability (interquartile range and/or mean absolute deviation), as well as describing any overall pattern and any striking deviations from the overall pattern with reference to the context in which the data were gathered.</li> <li>Relating the choice of measures of center and variability to the shape of the data distribution and the context in which the data were gathered.</li> </ol> <p>MAFS.8.F.2.5 – Describe qualitatively the functional relationship between two quantities by analyzing a graph (e.g. where a function is increasing or decreasing, linear or nonlinear.) Sketch a graph that exhibits the qualitative features of a function that have been described verbally.</p>
